

Training Types

The Training Types field appears in the Build Capacity channel within the Capacity Activities sub-channel when the Activity Type, "Training" is selected.

The Training Type field is used to **identify the type of training or learning opportunity** attended by the provider and/or individual staff member, member, or partner associated with your account. These options represent well-known conferences, training, and professional development opportunities related to substance use disorder prevention and mental health promotion.

Select the option that best reflects the training or learning opportunity attended. If the training does not appear in the list, select the option that most closely represents the learning opportunity.
