General Needs Assessment Feedback

SPE 5 Year Plan Update - July Meeting

I would really like to use specific numbers around the timeline. Can you walk through it specifically focused on efforts for the next plan iteration?

Are we going to have any goals to address health disparities?

I wonder if it would be good on the resource assessment to ask if resources have increased, decreased or stayed the same from 2017-2022 and what is our recommendation for the next 5 years? Is that something that need to grow, stay the same or no longer a priority?

How about adding Youth SUD Diagnoses? We learn that we have a list of youth with marijuana diagnoses as a SUD problem in Long Term Consequence. I do not believe we capture that? I know SUD numbers. I know why that? Was 2018 just a higher than the 2021 SUD numbers. Is that something that need to grow, stay the same or no longer a priority?

How about adding Youth Adults went up during the pandemic?

We need to let our federal funders understand that we need to address the underlying issues of these problems for example for DUI we need to look at reducing the THC levels for marijuana users. We are contracting factors to use.
