## **HCA Overview**

The <u>Health Care Authority</u> is committed to whole-person care, integrating physical health and behavioral health services for better results and healthier residents.

A healthy and thriving community has safe places to learn, work and raise a family. The people who live there enjoy equal access to quality education and health care, living wage jobs and affordable housing. Overall, there is a high quality of life for everyone.

Substance use and mental health disorders can impact the emotional, financial, legal, and medical health of individuals, families, and communities. Preventing these impacts saves communities social costs due to healthcare, social services, and judicial services. Therefore, effective prevention services are vital for every community. As part of our mission to provide high quality health care through innovative health policies and purchasing strategies, the Health Care Authority (HCA) works with our partners to leverage limited resources to help high-need communities. By investing in best practices and our state's prevention workforce, we support communities in creating sustainable, healthy changes.

## **Prevention Overview**

As part of the Health Care Authority he Division of Behavioral Health and Recovery (DBHR) Substance Use Disorder (SUD) Prevention and Mental Health Promotion (MHP) Section coordinates efforts to help individuals and communities with problems related to substance misuse, mental health promotion and suicide prevention. DBHR provides funding to plan and implement prevention programming through community prevention coalitions, tribes and community-based organizations for individuals and families of all ages. The Prevention Section supports DBHR's promotion of wellness by working with contractors like you to delay the onset of substance use, reduce the risk for future problems related to problem alcohol, tobacco, cannabis, opioids and other drugs, increase emotional wellness and resiliency skills, and prevent suicide.

## The Prevention Story

There is a story that is frequently used to illustrate what prevention is and what it is not.

Susan and Fernando are fishing on a river when they see a person in the water who is struggling to stay afloat, so Fernando drops his fishing pole and pulls the person out of the water. The person sputtering and cold. Susan calls an ambulance to take them to a hospital. Susan and Fernando go back to fishing. Pretty soon they look upriver again and see another person struggling in the water! This time Susan drops the fishing pole and pulls the person out of the water. Fernando calls another ambulance to take them to a hospital.

The friends return to fishing when they look upriver and see a whole group of people in the water! They are struggling to stay afloat. Fernando and Susan both drop their fishing poles and pull all the people out of the water. Resting aside the bank of the river, Fernando looks up and sees Susan walking away. He calls to her, "where are you going," and Susan responds that she is going upriver to find out why people are ending up in the water.

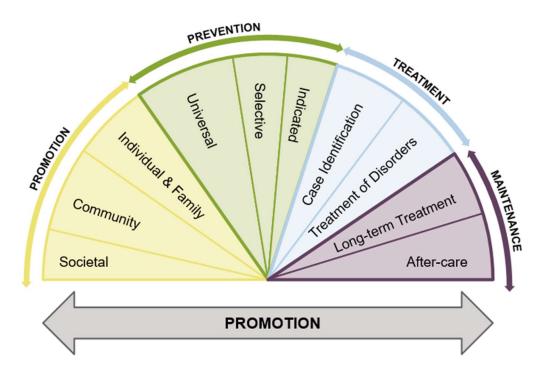

### What prevention is

Prevention services and strategies "go upriver" to find out what contributes to people developing substance use and mental health disorders and needing treatment services. In this analogy, we want to know exactly what is contributing to people falling into this river. Perhaps Susan goes upstream and finds a fence built to keep people away from the river has fallen and needs to be rebuilt. Or, Susan finds a slippery slope running into the river and can plant vegetation on the slope to prevent people from falling into the river. In prevention work, we want to find out what is contributing to substance misuse and/or poor mental health in our community, and then we work to reduce those risks and to build protection.

## What prevention is not

Once people have developed mental health and/or substance use disorders, they are more appropriately candidates for treatment services than they are prevention.

## <u>Institute of Medicine Spectrum of Mental, Emotional, and Behavioral Interventions</u>

## Mental health promotion interventions

Targeted to the general public or a whole population. Interventions aim to improve individuals' overall wellbeing through improving an individual's ability to contribute to their community and develop a positive sense of self-esteem, mastery, well-being, and social inclusion, and strengthen their ability to cope with adversity or resiliency.

### **Universal prevention**

Targeted to the general public or a whole population that has not been identified on the basis of individual risk. The intervention is desirable for everyone in that group. Universal interventions have advantages when their costs per individual are low, the intervention is effective and acceptable to the population, and there is a low risk from the intervention.

## Selective prevention

Targeted to individuals or a population subgroup whose risk of developing disorders is significantly higher than average. The risk may be imminent, or it may be a lifetime risk. Risk groups may be identified on the basis of biological, psychological, or social risk factors that are known to be associated with the onset of a substance, mental, emotional, or behavioral disorder. Selective interventions are most appropriate if their cost is moderate and if the risk of negative effects is minimal or nonexistent.

## **Indicated prevention**

Targeted to high-risk individuals who are identified as having minimal but detectable signs or symptoms foreshadowing substance, mental, emotional, or behavioral disorder, or biological markers indicating predisposition for such a disorder, but who do not meet diagnostic levels at the current time. Indicated interventions might be reasonable even if intervention costs are high and even if the intervention entails some risk.

## Washington State Prevention Programs and Services

Our prevention work supports a number of statewide programs and initiatives to help prevent substance use disorders, promote health and wellness and prevent suicide in communities across Washington State. Prevention services include funding for tribal, community and school-based prevention programs and strategies, statewide public education, policy efforts, technical assistance, and training.

### > Tribal prevention and wellness programs

HCA provides funding, technical assistance, and training to 29 federally recognized tribes. Tribal communities implement programs that are specific to each tribe's needs, culture, and traditions. Tribes

develop prevention programs, or select evidence-based programs, based on key prevention research in order to best serve their members and surrounding community members. Most tribes use funding for prevention services for community-wide and direct service programs.

### > Community Prevention and Wellness Initiative

The Community Prevention and Wellness Initiative (CPWI) is a community-led effort to prevent young people from drinking alcohol or using other drugs. Backed by science and supported by state resources, CPWI brings communities together to build healthy environments where Washingtonians of all ages can be safe and thrive.

Currently working in approximately 100 high-need communities in all 39 counties across Washington State, CPWI is committed to supporting historically underserved populations. This model has proven successful, with significant decreases in alcohol, cannabis and cigarette use among youth since it began in 2011. For more information, visit TheAthenaForum.org/CPWI.

## > Student Assistance Prevention and Intervention Services Program

The Student Assistance Prevention and Intervention Services Program (SAPISP), operated by the Educational Service Districts, places intervention specialists in schools to address youth substance use. Program funds are distributed to all nine Educational Service Districts (ESDs) in Washington, who partner with the CPWI coalitions in their region. Student Assistance Professionals (SAPs) provide:

- Early alcohol and other drug education and prevention in classrooms and for school-wide activities
- Screening and early intervention services to students and their families
- Referrals to behavioral health treatment providers
- Help with transitioning back to school for students who have had alcohol or other drug problems
- Coordination with community coalitions

### > Community Based Organizations

Funding is provided to Community Based Organizations (CBOs) to serve more high-need communities in Washington. These organization comprise of non-profits, ESD's, schools, and local governmental entities. These efforts comprise of implementing evidenced-based programs and strategies to meet an identified community need. These programs include but are not limited to mentoring, parenting education, youth skill-building and community awareness activities. To capitalize on the strategic efforts of CPWI's, CBOs are encouraged to partner with existing community coalitions to expand capacity and meet identified needs.

## > Suicide prevention and mental health promotion

As part of Washington's Suicide Prevention Plan, some Community Based Organizations and CPWI coalitions receive support for mental health promotion and suicide prevention through the Mental Health Promotion Project (MHPP) funds. The purpose of projects is to increase individuals', families' and communities' emotional wellness and resiliency skills and reduce the number of people with the onset of mental health conditions like depression and anxiety. Communities are able to select either to address mental health promotion programs/strategies or suicide prevention programs/strategies or a combination of both. We offer a variety of evidenced-based/research-based and promising programs/strategies communities can select from to implement to meet their community need. Innovative suicide prevention programs/strategies are also allowed. All MHPP funded communities must also provide Youth Mental Health First Aid (YMHFA) training and community awareness activities to increase their communities' awareness of mental health and/or suicide prevention. YMHFA is an education training for adults on how to recognize the signs and symptoms of possible mental health challenges, including suicidal ideation in youth, and gives them an action plan of how to help and get them to professional resources if necessary. For more information, visit TheAthenaForum.org/EBP.

## > Statewide public awareness and education campaigns

HCA maintains several statewide substance use disorder prevention and mental health promotion campaigns that target different audiences, including teens, young adults, and parents. For more information, visit TheAthenaForum.org.

### > College Coalition for Substance Abuse Prevention

The College Coalition for Substance Abuse Prevention is a collaboration of wellness program coordinators at 37 universities, colleges, and community colleges in Washington. The group meets regularly to discuss common issues and problems, as well as host webinars and an annual conference focused on preventing and reducing use among young adults. For more information, visit ccsap.wsu.edu.

## > Washington Healthy Youth Coalition

The Washington Healthy Youth (WHY) Coalition provides state-level leadership to reduce underage drinking and cannabis use by leveraging resources from federal and state partners. Membership includes over two dozen state agencies and statewide organizations. Coalition work includes:

• Creating, maintaining, and promoting the StartTalkingNow.org website for parents, caregivers, educators and other adult influencers

- Planning and implementing statewide education campaigns and providing educational materials to Community Based Organizations and schools
- Supporting policy changes at the state and community level to reduce youth access and exposure to alcohol and cannabis
- Supporting policies and law enforcement efforts that help to prevent underage alcohol and cannabis use

For more information, visit TheAthenaForum.org/WHY.

## >Conferences and Workforce Development

• Prevention Summit

The Prevention Summit provides training and networking opportunity for youth, volunteers and professionals working towards the prevention of substance use disorders, mental health promotion, suicide prevention, and integrating prevention into primary care.

Learn more: <a href="http://preventionsummit.org/">http://preventionsummit.org/</a>

Spring Youth Forum

The Spring Youth Forum is an opportunity to recognize and reward youth prevention teams that have implemented a successful prevention project within their communities. The Spring Youth Forum is the follow-up conference to the Prevention Summit. The Prevention Summit and the Spring Youth Forum work to encourage, reward and support youth-led prevention work in communities throughout Washington.

Learn more: https://springyouthforum.org/

Workforce Development

Developing the workforce in Washington State is just one of the ways that the Division of Behavioral Health and Recovery (DBHR) has contributed to expanding the reach and impact of prevention services in the state. DBHR provides many opportunities for current prevention providers to continue their education, as well as several opportunities for high school and college students to train into prevention via our Fellowship and Internship programs.

## **Chapter 2: CBO General Information**

Purpose of Community-based Organization Grants	. 11
Implementation of your CBO grant	. 12
Quick Reference Timeline	. 16

## Purpose of Community-based Organization Grants

HCA's Division of Behavioral Health and Recovery (HCA/DBHR) awards contracts to <u>Community-Based</u> <u>Organizations (CBOs)</u> to provide quality and culturally competent Evidence-Based Programs, Research-Based Programs, and Promising Programs to address Substance Use Disorder Prevention, Mental Health Promotion, and Suicide Prevention. We provide these grants to contractors to implement direct primary prevention programs, and environmental and public education strategies to prevent and reduce cannabis use among youth, promote mental wellness, and prevent suicide in high need communities.

The purpose of funding CBOs through this system is to provide opportunities for communities to plan and implement prevention programming where needs exist, expand knowledge of prevention science, and support the larger Community Prevention and Wellness Initiative of Washington State.

Currently, there are three types of funding sources for CBO grants:

- Dedicated Cannabis Account (DCA) funding
- Mental Health Promotion Project (MHPP) funding
- State Opioid Response (SOR) funding

Each of these separate funding types have different program lists which can be implemented as a part of their efforts. Program lists can be found <a href="https://example.com/here">here</a> on The Athena Forum website. Each of the funding types also has slightly different programmatic requirements, which are outlined in your contract.

#### > How are CBOs funded?

CBO grants are typically awarded as part of a Request for Application (RFA) process, usually conducted once every other year. Eligible applicants include any organization operating in the state of Washington that meets the minimum requirements outlined in the RFA for that biennium. This has included Tribal governments and Urban Indian organizations, local governments, school districts, colleges and universities, non-governmental organizations (NGOs), Health Departments, Educational Service Districts, faith-based organizations, and others.

Respondents of the RFA are required to submit an application outlining a proposal indicating the substance use/mental health needs of an identified community, a proposal for how the CBO will address those needs, including an action plan and budget, and an overview of how health disparities will be addressed by the CBO in that identified high-need community.

Action plans and budgets are conditionally approved by HCA/DBHR but may require some adjusting at the start of each contract period. Your Prevention Manager will support you in those edits and adjustments to ensure it continues to represent the base purpose of the RFA, the funding source

requirements, and includes only allowable expenses. Programs, strategies, and services implemented must directly tie back to the submitted RFA/original request for funding. Any exceptions to this must be approved by your Prevention Manager in advance.

In 2021, to expand the service delivery and equity of our CBO programming, HCA included two types of contractors for the CBO application, "Type A" and "Type B". Type A applicants were applicants that were existing or previous contractors or tied to a CPWI coalition in some financial capacity, and Type B applicants are new to the HCA/DBHR contracting/prevention system.

A current list of funded communities can be found here.

## Implementation of your CBO grant

#### > Your Contract

All CBO grantees receive a contract outlining specific expectations and contract requirements. It is the responsibility of the fiscal agent over each CBO grant to thoroughly read, review, and understand the entire contract. It is recommended that all program staff have an equal understanding of the programmatic and contractual requirements as well. We ask that at least one program coordinator is identified to engage in monthly check in calls with DBHR.

Once an applicant is successful in their application for funding services, they work with DBHR staff to make any needed updates to their proposal before finalizing an Action Plan and Budget. This plan and budget become the scope of the contract and must stay in alignment with the application as submitted in the RFA process. Small adjustments are permissible and a normal part of the work.

In addition to implementing programs and services, funded CBO contractors must also meet additional contractual obligations including:

- Meeting minimum reporting requirements on a monthly basis
- Attending required DBHR trainings
  - Learning Community Meetings
  - All Provider Meeting
  - o Others as identified (i.e., new contractor onboarding)
- Attending monthly check-in calls with their Prevention Manager
- Entering services monthly in DBHR's reporting system, Minerva
- Submitting monthly invoices for services rendered

## > Specific Requirements by Funding Source

## • Mental Health Promotion Project (MHPP) funding

Mental Health Promotion Project funding serves to address known gaps in mental health promotion and suicide prevention efforts in Washington. Because mental health and substance use disorders are frequently interconnected, DBHR believes that it is difficult to address one effectively and completely without addressing the other. In recent history, federal and state funding for substance use disorder prevention has been available and funding allowing for directly promoting mental health and preventing suicide has been scarce. This meant that community coalitions funded through the DBHR system were only permitted to address mental health and suicide through dual outcome programming with substance use disorder prevention outcomes when using DBHR funding.

In order to address this gap, DBHR worked to identify funding that was able to be used to address mental health promotion and suicide prevention directly. For several years, this funding was scraped together from underspent contracts and rolled out to communities in the winter months. The programming then had to be completely spent down by June 30 each year. Though a step in the right direction, this funding model lacked sustainability and prevented comprehensive planning and implementation throughout the year in a given community. This led to HCA to request state funding to support the program in a more sustainable way. These new state funds fund full 2-year grant cycles and began in 2019-2021 biennium.

Every two years, the available funding is used to support some staff time, state level work such as media campaigns, and direct to community funding in the form of MHPP CBO grants with the vast majority of funding going to the latter.

Currently funded MHPP CBOs must meet three specific requirements. These are: 1) implement a direct service as described below, 2) implement Youth Mental Health First Aid (YMHFA) trainings annually, 3) implement at least one community awareness raising activity per year. Direct service programming to promote mental health and prevent suicide must fall under one or more of three categories: 1) implementation of evidence-based programs (EBP) or research-based programs (RBP) and services, 2)implementation of promising programs (PP) and services, and 3) implementation of innovative programs and services (only permissible for suicide prevention services). DBHR curates a list that is updated every biennium based on current research and data availability regarding the supporting evidence of effectiveness for a given program or intervention. The current list of approved programs can be found here: <a href="https://www.theathenaforum.org/EBP">https://www.theathenaforum.org/EBP</a>.

## • Dedicated Cannabis Account (DCA) funding

DCA project funding serves to address the requirements of Initiative 502. DBHR provide this funding to entities to implement youth cannabis use prevention services. The goal of this funding is to increase capacity to implement direct and environmental substance use disorder prevention services in high needs communities.

Dedicated Cannabis Account project funding serves to address the requirements of Initiative 502 (retail cannabis legalization). Funds come from a state account that is supported by cannabis revenues. DBHR provides this funding to entities to implement youth cannabis use prevention services. The goal of this funding is to increase capacity to implement direct and environmental substance use disorder prevention services in high needs communities.

As a requirement of the RCW 69.50.540 (revised in 2022), supported programming must aim to prevent or reduce maladaptive substance use or substance use among middle-school and high-school aged youth. The link to these outcomes may be explicit or a consistently corresponding effect of program implementation, mental health services, or services for pregnant and parenting women.

DBHR has worked extensively with research experts to evaluate candidate programs and curate a list of programs that satisfy these requirements. This list can be found here:

<a href="https://www.theathenaforum.org/EBP">https://www.theathenaforum.org/EBP</a>.

Note: Prior to 2022, RCWs required a specific percentage (85%) of funding be spent on Evidence-Based Programs (EBPs) and that all programs be cost-beneficial. Legislation passed in 2022 removed these specific requirements for DCA-funded programs. At which point DBHR shifted to utilize the system wide standard used for most other fund sources, which currently is a minimum of 60 percent.

## • State Opioid Response (SOR) funding

State Opioid Response (SOR) is funding provided through the Federal Substance Abuse and Mental Health Services Administration (SAMHSA) Grants Funding Opportunity. SOR-funded CBO's are required to implement at least one Evidence-Based Program (EBP) on the approved SOR EBP program list, required participation in the National Drug Take-Back Days held in Spring and Fall each year of the contract period – following regulations provided at <a href="https://takebackday.dea.gov/">https://takebackday.dea.gov/</a> if coordinating a drop off location in their area, and required dissemination of the statewide opioid prevention public education campaign, Starts with One (<a href="https://www.getthefactsrx.com">www.getthefactsrx.com</a>). Optional implementation of an environmental program or a social norms campaign is allowable.

#### **Technical assistance**

We are here to help! We encourage you to actively engage your DBHR Prevention Manager for assistance as you work on your CBO grant.

DBHR will provide guidance to assist the CBO site tier 1in working with the funded CBO for completion of the implementation tasks in the approved action plan and budget. We encourage you to use the training materials developed to assist in completing each requirement. For technical assistance, please contact your DBHR Prevention Manager.

You can also consult the online courses that have been recorded and posted in the OWL E-learning.

## Appendix 1: Action Plan and Budget

## **Completing the CBO Action Plan:**

Include an Action Plan in the appendix of the Plan using the template provided on the Athenaforum.org in the Community Library.

The Action Plan should provide details for each goal, objective, and strategy on the following:

- Activity/Program Name of activity/program
- Funding Source See legend for list
- o Brief Description Briefly state the main purpose of the activity
- o How How many times will the program be provided this year?
- o When List the implementation months of the activity
- o Who Who is this service for? How many people will be reached?
- o Lead List the Organization delivering program
- o Responsible Party(ies) Who from the Organization is making sure this gets done?

Follow Evidence-based Practice requirement(s) in contract.

\*Work with your Prevention Manager if needed. Below is a picture for reference.

Dedicated Marijuana Account Sample

Goal 1: Decrease family management problems (Minerva #11)

**Objective 1.1:** Increase use of family management skills (i.e., discipline strategies, techniques for

setting limits, approaches to monitoring youth behaviors) (Minerva #12, #13)

**CSAP Strategy\*:** Education (

Name of Program	Funding Source	Brief Description	How	Who & IOM Category*	Lead and Responsible Party(ies)	Surveys
Program Name	See list above	Briefly state the main purpose of activity	How much? How often? During which months?	Who is this service for? How many people reached? Is it Universal-Indirect, Universal-Direct, Selective, or Indicated?	Organization delivering program? Who is making sure this gets done?	What survey will you be using? How often (one- time, pre/post, etc.)?
Minerva #3	#7	#4	#18, #19	#16, #21, #22, #23	N/A	#24, #25
Strengthening Families Program for Parents and Youth 10-14 (SFP 10-14)	DMA	Strengthening Families Program is a family skills training intervention designed to enhance school success and reduce youth substance use and aggression among 10–14-year-olds.	2 cycles Nov- Dec 2021 March-April 2022 Total # of Sessions: One full series of a minimum of 7 sessions	Who & # reached: 10 families each cycle Parents/Caregivers of youth 10-14 years of age IOM: Universal-Direct	ABC Community-Based Organization	SFP 10-14 (Parent)(SFW SU_AX)

## **Budget Planning Worksheet**

### Introduction

Preparing a budget of income and expenses is a critical aspect when planning to implement a prevention program and/or activity. Each program/activity will require different resources and your organization may have a unique capacity to implement a program/activity with existing resources. When estimating the cost of programs and/or activities your budget must include funding for: staff, facilities, promotion of the program, materials, and supplies. But each program is *unique*, so it is important to research the program(s)/activity(s) you are considering implementing in your community. Read through each of these categories for assistance in determining an overall cost.

## **General Staff Expenses Categories:**

Staff Costs to Support Program Implementation

- A. Staff salaries
- B. Staff benefits
- C. Travel (mileage)
- D. Office supplies and materials
- E. Media access
- F. Sub-contracts (if allowed and/or needed)
- **G.** Administrative costs

## **Program Cost Expense Categories:**

Definition: Materials you will need to implement your program/activity

Things to Consider: How many participants you will be serving? Can you prepare the materials yourself or do you need to hire someone to prepare them for you? Do you need to design your materials to promote the program? Examples may include: Educational materials or curriculum, promotional materials, incentives (if allowed by grant funding), printing of pre-post surveys, brochures, posters, etc.

Start-Up/One-time Fixed Costs	
Initial training and technical assistance	In-person training (travel-per diem staff or trainer) Online training (registration costs per person)
Curriculum and materials (manuals, toolkits, DVDs, certificates, posters to reinforce materials)	Annual curriculum cost or one-time cost
Licensing	One-time or ongoing
Other start-up costs	The costs of staff time while attending training
Promotional costs	Print, cost of media push, media design, radio, newspaper

Ongoing training - technical assistance/Varying, ongoing Costs	
Fidelity implementation, monitoring and	Time for staff to support implementation and
evaluation	evaluate effectiveness
Ongoing license fees	Online use or copyright consumables
Other implementation support and fidelity	Tracking participants, pre-post survey
monitoring	collection/entry, Prevention Substance
	Database Entry

### **Implementation Expense Costs Categories:**

Definition: Meetings and activity expenses while implementing your program/activity

Things to consider: Do you have the proper space needed for meeting and/ or conducting activities? Do you have community partners that can donate space? Do you have the proper equipment and technology platforms/tools to conduct the program/activity? Do you have enough staff to implement the program with fidelity?

Consider working with community partners for any "in-kind" donations to help support the services being provided by your organization and reduce the cost of programming. These may include: bookkeeping services, office equipment, meeting space, printing, meals & refreshments and volunteer time.

One Year Cost Example: Serving 60 participants

**Start-Up Costs** 

Trainer online \$1,000.00

Leaders manual/lessons DVD = \$500.00

Materials for 60 participants: Workbooks (\$70) = \$4,200

Promotion of the program: \$250.00

## **Implementation Costs**

Group leaders' time @ \$25/hour x 2 leaders x 5 hours/week x 10 sessions x 4times a year= \$10,000

Staff Benefits (25%) = \$2,500 Admin Costs (8%) = \$1,516

#### **Total First Year Cost= \$19,926.00**

This estimate example can help you develop a budget. Please note that program costs will vary so it is important to do your research before selecting a program. In addition, the budget template is meant to be used as a guide and may be customized by the applicant to fit the actual program/activity structure more closely.

How do I know how much a program may cost? It is best to visit directly with the developer of the program or you may visit prevention databases, such as the Athena Forum's <a href="Excellence in Prevention Strategy List">Excellence in Prevention Strategy List</a>, to help estimate the costs of implementing a program, but be cautious as not all the costs will apply to your organization depending on the resources currently available within your organization or through partnerships.

## **Example Budget**

Below is an example budget for a DMA funded CBO. Please go to <a href="https://theathenaforum.org/shared-documents-old">https://theathenaforum.org/shared-documents-old</a> to find your most recent template

## **Appendix 2: Risk and Protective Factor Theory**

#### > Overview<sup>1</sup>

Many factors influence the likelihood that an individual will develop a substance use disorder or related behavioral health problem. Effective prevention focuses on reducing the factors that put people at risk of behavioral health disorders and strengthening those factors that protect people from these disorders.

Risk factors are certain biological, psychological, family, community, or cultural characteristics that precede and are associated with a higher likelihood of behavioral health problems.

Protective factors are characteristics at the individual, family, or community level that are associated with a lower likelihood of problem outcomes.

Risk and protective factors exist in multiple domains, including:

- Individual level: Examples of individual level risk factors include genetic predisposition to addiction or exposure to alcohol prenatally; protective factors include positive self-image, self-control, or social competence.
- Family level: Examples of family level risk factors include child abuse and maltreatment, inadequate supervision, and parents who use drugs and alcohol or who suffer from mental illness; a protective factor would be parental involvement.
- Community level: Examples of community level risk factors include neighborhood poverty and violence; protective factors might include the availability of faith-based resources and afterschool activities.
- Society level: Examples of society level risk factors include norms and laws favorable to substance
  use, as well as racism and a lack of economic opportunity; protective factors include policies
  limiting availability of substances or laws protecting marginalized populations, such as lesbian,
  gay, bisexual, or transgender youth.

In prevention, it is important to address the variety of factors across these domains that influence both individuals and populations. Next, we describe the risk and protective factors associated with the three primary sources of funding areas: opioid prevention, cannabis prevention, and mental health promotion/suicide prevention.

## Risk and Protective Factors Identified for <u>Youth Opioid and Cannabis Use Prevention</u> include:

- Individual/peer favorable attitudes toward drug use
- Individual/peer perceived risks for drug use
- Individual/peer intentions to use drugs
- Peer use of drugs
- Parental favorable attitudes toward drug use
- Family management

<sup>&</sup>lt;sup>1</sup> RI Prevention Specialist Certification Exam Study Guide

### Risk and Protective Factors Identified for Innovative Suicide Prevention include:

### > Risk Factors

#### Societal

Media violence

### Community

- Poor neighborhood support and cohesion
- Transitions and mobility

## Relationship

- Social isolation/lack of social support
- Poor parent-child relationships
- Family history of suicide
- Family management problems
- Family conflict
- High conflict or violent relationships

#### Individual

- Lack of non-violent social problem-solving skills
- Poor behavioral control/impulsiveness
- History of violence victimization
- Witnessing violence
- Psychological/mental health problems

#### > Protective Factors

### Community

- Coordination of resource and services among community agencies
- Access to mental health and substance use disorder prevention and treatment services
- Community support or connectedness

### Relationships

- Family support or connectedness
- Connection to a caring adult
- Connection or commitment to school

#### Individual

• Skills in solving problems non-violently

## **Appendix 3: Understanding Community Survey Selection**

The table below has been created using the Washington HCA/DBHR system logic for measuring change in objectives to address risk and protective factors. It has been developed to assist users in the Minerva system to select the appropriate survey question banks based on the risk and protective factors identified for program selection and implementation. Please note this is only a full snapshot of the survey selection guide and the full document can be found at: <a href="https://theathenaforum.org/surveyselection">https://theathenaforum.org/surveyselection</a>

Survey Selection Guide				
RISK/PROTECTIVE FACTOR (INTERVENING VARIABLE)	MEASURABLE OBJECTIVE (LOCAL CONDITION)	SURVEY OPTIONS		
If you selected a program or strategy to address this R/P factor	and you selected this objective to be your measure of change	Then these are the survey options in Minerva 2.0.		
(P)Community: Bonding (opportunity, skills, and	Acquisition of culturally defined values using a cultural and social context	No survey in Minerva 2.0. Survey(s) may be added upon request.		
recognition)	Opportunities, skills and recognition for prosocial involvement in the community	Participant Survey Community Connections [APMY04]  VOICE [Org129_1]  Youth Participation - Opportunities for Prosocial Involvement [C006]		
(P)Community: Healthy Beliefs an Clear Standards	Opportunities, skills and recognition to promote bonding to community role models who exhibit healthy beliefs and clear standards	AM Bonding/Attachment [Y1]		
	Understanding of influence of community norms on children's lives	No survey in Minerva 2.0. Survey(s) may be added upon request.		
	Understanding of the importance of the Tribe's culture, traditions, and heritage	Participant Survey Snoqualmie Canoe Family [Org212_1]		
(P)Engagement and connections in one or more of the following contexts: school, peers, family, employment or culture	Opportunities for increasing sense of connectedness to community, self-esteem and sense of wellbeing	VOICE [Org129_1] Self-Esteem [IP008] PlayWorks* *To be incorporated soon		
(P)Family: Bonding (opportunity, skills, and recognition)	Knowledge of nurturing parenting techniques	Learning Coalition Parent Skills Index (revised) [Org131007_2] Learning Coalition Parent Skills Index – Extended Version [Org131007_3]		
	Opportunities, skills and recognition to contribute to family bonding	AM Bonding/Attachment [Y1]  Mentee Teacher Survey [MT09]  Mentor Support Tracking [MT04]  Mentee Quality of Match – Follow Up [MT08]  Positive Family Management [APMF03]		

SUD Prevention and MH Promotion Online Reporting System Understanding Survey Selection in Minerva

#### Survey Selection in Minerva

Surveys are used for evaluating participants and partners and the effectiveness of programs. When creating a Program Planning Profile, select the primary risk factor or protective factor and associated measurable objective that describes the goal of the program.

Minerva will list survey(s) that measure the identified objective and align with the selected risk or protective factor. Questions within the listed surveys have been identified by DBHR as measuring the effectiveness of prevention services.

For each survey, report the date the survey was taken by the participant, enter into Minerva the responses, and indicate whether the survey was one-time, pre, mid, post, or follow-up.

**Ready to identify potential surveys?** Use the **Survey Selection Guide** which begins on the next page to identify surveys. The first column includes risk and protective factors and the second column lists measurable objectives. Use CTRL-F to quickly search for key phrases (e.g. search for *healthy beliefs* to find protective factors that include healthy beliefs).

This guide is also posted on the Minerva Knowledge Base (<a href="www.TheAThenaForum.org/MKB">www.TheAThenaForum.org/MKB</a>) and in Section IX of the Minerva User Guide (<a href="www.TheAthenaForum.org/MinervaUserGuide">www.TheAthenaForum.org/MinervaUserGuide</a>)

Don't see an expected survey on this list or in Minerva or need more help with risk/protective factors and measurable objectives? Contact the Prevention System Manager you work with for assistance with surveys in Minerva.

## Appendix 4: <u>CBO-Specific Reporting Requirements</u>

#### > Overview

For each program or strategy identified in your action plan, you must track and report in the data management system. You will need to identify a system to track and report the following information per program. Please note that your community may have slightly different variations for reporting based on your structure (i.e., embedded within a CPWI community, statewide delivery, etc.). This will be discussed and negotiated with DBHR at the start of your contract.

### Session reporting:

- Each session of a program must be tracked and reported, including data, length of session, location
- o Participant level information including demographics
- o Participant attendance
- Pre survey implementation
- Post survey implementation
- Program coordination:
  - Direct time: Time spent directly implementing a session of a program with program participants present
  - o Indirect time: All program coordination prior/post session implementation in relation to program, i.e., program recruitment, series and session preparations activities, etc.
- Start-up/wrap-up activities such as:
  - Program coordination taking place in months prior/post series of program (indirect) can be reported
  - Curriculum purchases
  - Trainings
  - Outreach and recruitment

## > A note on reporting administration/indirect expenses

Administrative expenses are those that may relate to organizational operation that makes this grant coordination possible but are not directly related to the program. These may include expenses like overhead costs related to office space, use of the organization's equipment/software, executive director/leadership oversight, and more.

Support staff who assist with coordination of programing (i.e., accounting processing of billing, administrative staff assistance with supply collection, set up, etc. for session implementation) are not typically administrative expenses. Support staff may be billed and reported as indirect time, but this should be discussed with your Prevention Manager.

## **Appendix 5: Social Norms Marketing Guidance**

The document below has been created to help prevention contractors understand the requirements to implement a Social Norms Campaign effectively. Please note this is a snapshot only and full document can be found at: https://www.theathenaforum.org/community-library

## Community Prevention and Wellness Initiative (CPWI) & Community-Based Organization (CBO)

### Social Norms Marketing Guidance

The purpose of this document is to ensure social norms marketing (SNM) campaigns are implemented to fidelity and achieve positive outcomes.

The intent of SNM is to promote accurate and healthy norms that are often underestimated. According to the social norms approach, when individuals incorrectly perceive that most of their peers (or other community members) engage in problem behaviors such as substance use then they do as well. Social norms messages aim to correct misperceptions related to the frequency and/or extent of problem behaviors and close the gap between perceived and actual norms. As a result, problem behaviors may decrease and engagement in healthy behaviors may increase.

DBHR prevention contractors should use the following guidance in developing and implementing SNM campaigns.

- When using DBHR funding, SNM should be designated as CSAP strategy "Information Dissemination" for all
  documents (e.g., strategic plans, action plans, budgets, A-19s), and reporting should reflect this designation.
- SNM campaigns must adhere to specific training and implementation criteria (see checklist below)<sup>2</sup>.

#### **SNM Implementation Checklist**

implementation.

Train a minimum of one key leader/coalition staff member involved in the local SNM effort in at least 18 hours of training on designing and implementing SNM campaigns. Utilize local data and the approved strategic plan to identify an outcome (e.g., reduce youth marijuana use) and gaps related to the outcome based on community-specific perceived and actual norms related to the targeted risk behaviors. Identify information about perceived and actual norms for the target audience(s) (e.g., parents, youth, adults in the community) using existing baseline data or conduct a survey to gather data on the gap between perceived and actual norms. Collaborate with community members to assess the data and confirm that a SNM campaign is the best strategy for impacting the gap between actual and perceived norms. □ Collect information (e.g., interviews, focus groups) to identify characteristics of the target audience(s) relevant to message design and dissemination. Pilot test messages (text, graphics, tone) with the target audience(s). Develop a communications plan to determine the message "dose" and mode(s) of message delivery to impact misperceptions of norms. Develop an evaluation plan including follow-up surveys or the analysis of follow-up data on community behaviors

and perceptions/attitudes to determine if the gap between perceived and actual norms has changed. Pre-and posttest measures should be based on the identified outcome and baseline data should be gathered prior to campaign

June 7, 2019

<sup>&</sup>lt;sup>3</sup> SNM is not classified as CSAP strategy "Environmental" and therefore cannot be used to fulfill associated DBHR requirements.

<sup>&</sup>lt;sup>2</sup> DMA funds may be used for SNM campaigns that meet all of the checklist criteria. These campaigns are considered "Promising Programs."

## **Appendix 6:** Institute of Medicine (IOM) Categories

Please note this is a snapshot only and full document can be found at: <a href="https://www.theathenaforum.org/institute-medicine-iom-categories">https://www.theathenaforum.org/institute-medicine-iom-categories</a>.

### IOM CATEGORIES

The Institute of Medicine (IOM) model, often referred to as a continuum of services, care, or prevention, classifies prevention interventions according to their target population. Classification by population provides clarity to differing objectives of various interventions and matches the objectives to the needs of the target population. The IOM identifies the following categories based on level of risk: Universal – Indirect, Universal – Direct, Selective, and Indicated.

Category	Definition/Description
Universal - Indirect Targets the general population and are not directed at a specific risk group.	Interventions support environmental strategies. Universal direct activities include modifying policy related to alcohol, tobacco, or other drugs, limiting advertising practices for alcohol, tobacco, or other drugs, and coalition activities.
Universal – Direct Targets the general population and are not directed at a specific risk group.	Interventions directly serve a group of participants who have not been identified as having any risk factor for substance abuse.
Selective Targets those at higher-than-average risk for substance abuse; individuals are identified by the magnitude and nature of risk factors for substance abuse to which they are exposed.	Selective prevention measures target subsets of the total population that are considered at risk for substance abuse by virtue of their membership in a particular segment of the population. Selective prevention targets the entire subgroup, regardless of the degree of risk of any individual within the group.
Indicated Targets those already using or engaged in other high-risk behaviors to prevent heavy or chronic use.	Indicated prevention measures are designed to prevent the onset of substance abuse in individuals who do not meet the medical criteria for addiction, but who are showing early danger signs. The mission of indicated prevention is to identify individuals who are exhibiting problem behaviors and to involve them in special programs.

## **Appendix 7:** Center for Substance Abuse Prevention (CSAP) Definitions

Please note this is a snapshot only and full document can be found at: <a href="https://www.theathenaforum.org/CSAPprinciples">https://www.theathenaforum.org/CSAPprinciples</a>.

## Center for Substance Abuse Prevention (CSAP) Definitions:

- Information dissemination: This strategy provides awareness and knowledge of the nature and extent
  of substance use, abuse, and addiction and their effects on individuals, families, and communities. It
  also provides knowledge and awareness of available prevention programs and services. Information
  dissemination is characterized by one-way communication from the source to the audience, with
  limited contact between the two.
- Education: This strategy involves two-way communication and is distinguished from the information
  dissemination strategy by the fact that interaction between the educator/facilitator and the
  participants is the basis of its activities. Activities under this strategy aim to affect critical life and social
  skills, including decision-making, refusal skills, critical analysis (e.g., of media messages targeting youth),
  and systematic judgment abilities.
- Alternatives: This strategy provides for the participation of target populations in activities that exclude substance use. The assumption is that constructive and healthy activities offset the attraction to – or otherwise meet the needs usually filled by – alcohol and drugs and would, therefore, minimize or obviate resort to the latter.
- 4. Problem identification and referral: This strategy aims at identification of those who have indulged in illegal/age-inappropriate use of tobacco or alcohol and those individuals who have indulged in the first use of illicit drugs in order to assess if their behavior can be reversed through education. It should be noted, however, that this strategy does not include any activity designed to determine if a person is in need of treatment.
- Community-based process: This strategy aims to enhance the ability of the community to more
  effectively provide prevention and treatment services for substance abuse disorders. Activities in this
  strategy include organizing, planning, enhancing efficiency and effectiveness of services
  implementation, interagency collaboration, coalition building, and networking.
- Environmental: This strategy establishes or changes written and unwritten community standards, codes, and attitudes, thereby influencing incidence and prevalence of substance abuse in the general population.
- 7. Other: Prevention Training
